
Are solar energy storage batteries valuable

Is it worth getting a solar storage battery?

A solar battery allows you to store electricity produced by your solar panels and use it later or, in some cases, sell it back to the grid to make a few quid - but they're not cheap. Read on to see if it's worth getting a solar storage battery for your home... This is the first incarnation of this guide.

How much money can a solar battery save a year?

Only around £130 a year is saved by using stored energy in your battery. As solar batteries come with a huge upfront cost, and the extra savings are relatively small, most will be unlikely to recoup the cost of buying a battery over its lifespan - though of course, it depends on the cost of the battery, the price of electricity and how you use it.

Should you buy a solar battery?

They can provide emergency backup power and, in places like California, can unlock greater savings from home solar panels. A solar battery might help you stretch your solar energy through the night, or just have a bit more peace of mind. While solar batteries have plenty of benefits, they're not a good fit for everyone.

How much does a solar battery cost?

Solar batteries come with a hefty upfront cost. The actual cost will depend on your home and the size of the battery you want or need, but it can range between £1,000 and £10,000. You'll likely need two batteries during the life of your solar panels. Batteries last around 15 years, while solar panels last about 25 years.
