# Batteries used in large energy storage power stations

What are battery storage power stations?

Battery storage power stations are usually composed of batteries, power conversion systems (inverters), control systems and monitoring equipment. There are a variety of battery types used, including lithium-ion, lead-acid, flow cell batteries, and others, depending on factors such as energy density, cycle life, and cost.

What are energy storage batteries?

As the adoption of renewable energy storage continues to grow rapidly, the demand for efficient and reliable energy storage solutions has also surged. Energy storage batteries (lithium iron phosphate batteries) are at the core of modern battery energy storage systems, enabling the storage and use of electricity anytime, day or night.

Why is battery energy storage important?

Battery energy storage is becoming increasingly important to the functioning of a stable electricity grid. As of 2023, the UK had installed 4.7GW /5.8GWh of battery energy storage systems, with significant additional capacity in the pipeline. Lithium-ion batteries are the technology of choice for short duration energy storage.
