## Battery cabinet test items summary

What information should be included in a battery test summary?

Lithium ion or lithium metal cell or battery; Mass of cell or battery; Cell or battery model number or, alternatively, if the test summary is established for a product containing a cell or battery, the product model number; Name and title of a responsible person as an indication of the validity of information provided.

Where can I find a lithium battery test summary?

Lithium battery test summaries can be made available in a variety of ways, including via a product information sheet (like the example below) and/or via a website. There is no set form or format for a lithium battery TS, but it must include all the required elements.

Should a test laboratory be aligned with a specific battery or product?

The test laboratory is not required to be aligned with a specific battery or product on the TS when the TS covers multiple batteries/products. It is required to have the test report number and date of test for each cell/battery/product listed on the TS. What is meant by "physical description" of cell/battery/product?

Do lithium batteries need to be tested?

This guide is intended only to provide information to the public regarding existing requirements under the Hazardous Materials Regulations. For safety reasons, lithium batteries must be subjected to a series of design tests per sub-section 38.3 of the United Nations (UN) Manual of Tests and Criteria.

Lithium battery test summaries can be made available in a variety of ways, including via a product information sheet (like the example below) and/or via a website.

**Brief Description** The ESS Battery Cell Performance Testing Cabinet is a high-precision system designed to evaluate the electrical and thermal performance of energy storage system (ESS) ...

The Battery Cell Performance Testing Cabinet is designed for comprehensive performance evaluation of battery cells, ensuring high reliability and precision. It supports tests for electrical, ...
