# Can energy storage power stations be built into factories

Can buildings be power stations?

One of SPECIFIC's key areas of investigation is its vision for "Buildings as power stations". This essentially refers to buildings that can generate, store and release their own energy. To date, 29 patents for innovation related to this research have been filed.

What is building as a power station?

The first complete "Building as a power station" has been constructed in Baglan, south Wales, as an "off-grid", self-sufficient building concept that only uses energy generated by the sun.

How can factories improve sustainability?

Integrating renewable energy sources like solar, wind, and biomass, factories can reduce pollution, enhance operational efficiency, and align with global sustainability goals. This transformation is not just theoretical--it's already happening.
