
Can solar panels generate electricity for home use

Should you use solar power to generate electricity at home?

Using solar power to generate electricity at home is a very appealing option for a number of reasons: not only would you be reducing your overall environmental footprint and greenhouse gas emissions, but you would be reducing your bills and could even generate some income by selling back excess energy into the grid.

How do solar panels create a usable electricity system?

Here's how solar arrays create a usable electricity system for your home: As we've explained, the solar cells that make up each solar panel do most of the heavy lifting. Through the photovoltaic effect, your solar panels produce a one-directional electrical current, called direct current (DC) electricity.

What happens if a home solar power system produces more electricity?

If your home solar power system produces more electricity than you use, it can be stored in batteries or sent back to the grid, depending on your setup and local policies. A complete home solar power system includes more than just solar panels. Here are the essential parts: Solar Panels - Capture sunlight and produce DC electricity.
