# Dual-loop control of three-phase inverter

How is a three-phase PV Grid-connected inverter designed?

The three-phase PV grid-connected inverter was designed based on the LQR method, where the tracking error was adjusted to zero through integration (Al-Abri et al., 2024). The disturbance rejection ability of the PV GCI was improved by designing the linear state inaccuracy feedback control policy (Zhou et al., 2021).

What is a grid-connected inverter?

As the core device of the new energy production system, the grid-connected inverter plays a crucial role in transforming new energy into electrical energy. Rega

What is voltage-current dual-loop control (VDC)?

Firstly, the voltage-current dual-loop control (VDC) structure is adopted, where the model of the current loop is restructured benefitting from the current tracking principle.

What is a current loop optimal controller?

Therefore, the proposed current loop optimal controller, based on the off-policy IRL method, effectively controls the voltage and current of the grid connection in the semi-physical simulation experiment. It minimizes the THD of the grid connection, satisfying the requirements for grid connection. Fig. 11.

Symmetry of three-phase output voltage is one of the essential requirements for three-phase inverter. Conventional double-loop control strategy has a good control effect on ...

The research incorporates an LCL filter to mitigate high-frequency harmonics in the output voltage of the inverter and implements a dual closed-loop control strategy comprising ...

Abstract As to the concrete topology of three-phase LCL type grid-connected inverter with damping resistance, mathematical model was deduced in detail, using method of ...

A double loop control method is developed in this paper for a grid connected three phase inverter. The SVPWM strategy is developed to reduce the THD of inverter output voltage.

In this paper, a novel dual closed-loop repetitive control strategy based on grid current feedback is proposed for single-phase grid-connected inverters with LCL filters. The ...

The three-phase inverter is a crucial component for integrating photovoltaic power generation into the grid. Its performance directly impacts the stability and power quality of grid ...

A dual-loop (inner current loop and outer voltage loop) control scheme for micro electric source inverters in microgrid is improved in this paper. In order to make dual-loop control analysis ...

As the core device of the new energy production system, the grid-connected inverter plays a crucial role in transforming new energy into electrical energy. Regarding the ...

In order to make dual-loop control analysis more accurate, LC filter, SVPWM module equivalent are included in the inverter supplied system model.

In the control scheme, a dual-loop PI controller is proposed in which the coupling components in the model of three-phase inverters are analyzed and handled by feed-forward ...

---

According to the defects of traditional PI control, the paper presents a new method which is Proportional Complex Integral (PCI) control to implement the control of three-phase grid ...

This paper has analyzed in detail the implementation principles and process of the three-phase LCL grid-tied inverter, and has adopted the dual closed-loop feedforward control ...
