# Enterprise backup energy storage power supply

Do energy storage systems ensure a safe and stable energy supply?

As a consequence, to guarantee a safe and stable energy supply, faster and larger energy availability in the system is needed. This survey paper aims at providing an overview of the role of energy storage systems (ESS) to ensure the energy supply in future energy grids. On the opposite of existing reviews on the field that \* Corresponding author.

Why do we need energy storage systems?

and the electrification of transportation and heating systems. As a consequence, the electrical grid sees much higher power variability than in the past, challenging its frequency and voltage regulation. Energy storage systems will be fundamental for ensuring the energy supply and the voltage power quality to customers.

What is a supercapacitor energy storage system?

A 400kW, 1.0kWh supercapacitor energy storage system that aims at improving the power quality in the electrical grid, both in steady state (e.g., harmonic compensation) and during transients (e.g., fault-ride through). A 100kW, 200kWh battery energy storage system, that is based on distributed MMC architecture.
