
High-power emergency communication command base station

How do emergency command vehicles communicate after a disaster?

After a disaster, the emergency command vehicle arrives at the disaster site, and realizes data communication and relay communication with the rear emergency command center through satellite communication, ground fixed cable communication, and ground mobile communication networks.

Which emergency communication system should be used at a disaster site?

The emergency network at the disaster site can be deployed by emergency communication vehicles; however, in the case of complex terrain environments, such as earthquakes and floods, satellite communication system is a better choice.

What is an emergency communication system?

An emergency communication system comprises the integration and application of various communication technologies and approaches in an emergency.

Why do we need emergency communication systems?

With the frequent occurrence of natural disasters and the tightening of the international security situation, countries all over the world are strengthening and improving the construction of emergency communication systems and related technology research, and striving to deploy a more reliable and stable emergency communication network.

Cellular networks collapse precisely when survivors need them most. Communication base station emergency power systems become the last line of defense--but are they truly battle-ready? ...

With the development of 5G technology, a convenient and fast emergency communication solution is needed when the local ground base station is unavailable for ...

GENERAL - The HFGCS System is a worldwide network of 15 high-power HF stations providing air/ground HF command and control radio ...
