
Hybrid Solar Air Conditioning

Do hybrid solar air conditioning systems save energy?

Experimental study followed by a theoretical analysis of selected hybrid solar air conditioning system were done. The aim was to assess the actual energy saving potential of the system compared to conventional system, in its continuous as well as on off mode of compressor operation.

What is a solar hybrid air-conditioning system?

Solar hybrid air-conditioning systems that use thermal energy of solar radiation using evacuated tube solar collectors attached to it are commercially available in many markets.

Are solar hybrid air conditioners commercially available?

Conclusion Solar hybrid air conditioners are commercially available. They are claimed to save electricity by having longer compressor switch-off time in its operation.
