# Inverter boost to high frequency conversion

What is a high frequency inverter?

In many applications, it is important for an inverter to be lightweight and of a relatively small size. This can be achieved by using a High-Frequency Inverter that involves an isolated DC-DC stage (Voltage Fed Push-Pull/Full Bridge) and the DC-AC section, which provides the AC output.

What is a resonant boost DC-DC converter?

Abstract: This article presents a new resonant boost dc-dc converter suitable for operation at very high frequency (VHF). It consists of a series-parallel Class E inverter and a conventional Class E rectifier.

What is the boost factor of a VHF converter?

Compared with the existing VHF converters, the boost factor of the proposed inverter stage is increased to 2.06, which results in lower switching current stress and power losses for its converter. This is beneficial to select switching components and improve the power density.

Which power supply topologies are suitable for a high frequency inverter?

The power supply topologies suitable for the High-Frequency Inverter includes push-pull, half-bridge and the full-bridge converter as the core operation occurs in both the quadrants, thereby, increasing the power handling capability to twice of that of the converters operating in single quadrant (forward and flyback converter).

Analysis and Design of Multilevel Boost Inverter for High frequency with Reduced Components 1P.
