What is a grid-connected inverter?

4. Grid-connected inverter control techniques Although the main function of the grid-connected inverter (GCI) in a PV system is to ensure an efficient DC-AC energy conversion, it must also allow other functions useful to limit the effects of the unpredictable and stochastic nature of the PV source.

Do solar inverters need to be connected if a grid is unstable?

Old grid connection standards, perhaps influenced by skeptical grid operators, mandated that wind and solar inverters needed to disconnect from the grid if it became unstable. Enter: UL1741, a set of the latest grid connection standards that mandate new inverters stay connected and help out.
