What are the key parameters defining solar cell and panel performance?

The key parameters defining solar cell and panel performance are important in evaluating device capabilities, guiding technological improvements, enabling appropriate system design, and quantifying manufacturing quality.

What are the parameters of a solar cell?

The solar cell parameters are as follows; Short circuit current is the maximum current produced by the solar cell, it is measured in ampere (A) or milli-ampere (mA). As can be seen from table 1 and figure 2 that the open-circuit voltage is zero when the cell is producing maximum current ($I_{SC} = 0.65 \text{ A}$).
