What is a floating recovered oil storage tank?

The floating recovered oil storage tank is a towable floating oil/water storage tank with a hull shaped storage pocket. The tank/barge is manufactured from neoprene coated fabric, which is strong, durable and lightweight. The superstructure is composed of compartments with internal airtight conical bulkheads for increased integrity.

What are oil refinery storage tank sizes?

Oil refinery storage tank sizes vary widely based on their purpose, location, and operational requirements. Crude oil storage tank capacity can range from small tanks that hold a few thousand barrels to massive structures designed to accommodate millions of barrels of oil.
