What is grid connected solar microinverter reference design?

Microchip's Grid-Connected Solar Microinverter Reference Design demonstrates the flexibility and power of SMPS dsPIC[®]174; Digital Signal Controllers in Grid-Connected Solar Microinverter systems. This reference design has a maximum output power of 215 Watts and ensures maximum power point tracking for PV panel voltages between 20V to 45V DC.

What is a grid-connected solar microinverter system?

A high-level block diagram of a grid-connected solar microinverter system is shown in Figure 4. The term, "microinverter", refers to a solar PV system comprised of a single low-power inverter module for each PV panel.

What is a solar microinverter system?

The term, "microinverter", refers to a solar PV system comprised of a single low-power inverter module for each PV panel. These systems are becoming more and more popular as they reduce overall installation costs, improve safety and better maximize the solar energy harvest. Other advantages of a solar microinverter system include:

Can a solar microinverter connect to a PV module?

This microinverter has been designed to connect to any PV module having a power rating of approximately 250 watts, with an input voltage range of 25 VDC to 45 VDC, and a maximum open circuit voltage of ~55V. block diagram of the grid-connected Solar Microinverter Reference Design is shown in Figure 5.
