
Mobile energy storage power supply for mining

Are mining companies balancing the need for a reliable power supply?

At the same time, mining companies are balancing the need for a reliable and stable power supply to maintain productivity and reduce downtime. In the interview below, Juergen Zimmermann, Head of Business Development and Technology at Hitachi Energy, outlines some of the key challenges and opportunities facing the mining industry.

How can off-grid mining improve the environment?

For off-grid mining, renewable energy and storage technologies present an ideal opportunity not only to improve the mine's environmental footprint, but also reduce energy costs while improving power quality. We are seeing a strong drive to optimise energy across mines, including solutions for e-mobility and rapid charging.

Are electric haul trucks a viable solution for the mining industry?

The incorporation of electric-powered haul trucks is a huge opportunity for the mining industry. Designing a solution that can integrate battery-powered equipment with existing mining processes, without disrupting current (non-stop) operations, will be critical to achieving emission reduction targets.

Can solar power be used to power a mine?

Some mine operators are already using their own land adjacent to mines, to generate solar energy that is then used to power mine operations. These mine-owned projects can then be scaled up and tied to the grid to sell excess power back to local communities.
