## New energy battery cabinet negative electrode

Can nibs be used as negative electrodes?

In the case of both LIBs and NIBs, there is still room for enhancing the energy density and rate performance of these batteries. So, the research of new materials is crucial. In order to achieve this in LIBs, high theoretical specific capacity materials, such as Si or P can be suitable candidates for negative electrodes.

Are negative electrodes suitable for high-energy systems?

Current research appears to focus on negative electrodes for high-energy systems that will be discussed in this review with a particular focus on C, Si, and P.

Are Si<sub>3</sub>N<sub>4</sub> based negative electrodes suitable for lithium-ion batteries?

Si<sub>3</sub>N<sub>4</sub>-based negative electrodes have recently gained recognition as prospective candidates for lithium-ion batteries due to their advantageous attributes, mainly including a high theoretical capacity and minimal polarization.

What is the capacity of recycling and reusing negative batteries?

The designed workshop area is 60000 square meters, and the capacity of recycling and reusing retired negative Battery recycling is 50000 tons/year, 20000 to 60000 tons of negative precursor and new carbon material products, which are planned to be completed and put into use in 2024.
