Origin of wind power generation system

When did wind power start?

An important moment in history for wind power was during the US energy crisis of the 1970s, which forced researchers and leaders to explore alternative energy options.7 Development came primarily from the US with a research program backed by NASA, designed to find a utility scale energy resource.

When was the first windmill used to generate electricity?

The first windmill ever used to generate electricity (wind turbine) was in 1887in Cleveland, Ohio, designed by inventor and electrician Charles F. Brush. Today, most wind devices that we see are wind turbines, which generate electricity, but in some areas windmills are still used for grinding or pumping water. Modern History of Wind Power

Where did wind power come from?

By 200 BC, simple wind-powered water pumps were used in China, and windmills with woven-reed blades were grinding grain in Persia and the Middle East. New ways to use wind energy eventually spread around the world. By the 11 th century, people in the Middle East were using wind pumps and windmills extensively for food production.

Where did wind generators come from?

A forerunner of modern horizontal-axis utility-scale wind generators was the WIME D-30 in service in Balaklava,near Yalta,USSRfrom 1931 until 1942. This was a 100 kW generator on a 30 m (100 ft) tower,connected to the local 6.3 kV distribution system. It had a three-bladed 30 metre rotor on a steel lattice tower.
