How much does a solar inverter cost?

The overall cost breakdown shows that while necessary, inverters are a relatively small part of the total investment in solar technology. After applying tax credits, the total cost to install a solar system, inverter included, comes to between \$10,600 and \$26,500. In 2023, there was a 15% drop in the price of residential systems.

How to choose a solar inverter?

The key is to align your budget, performance needs, and long-term goals with the right inverter technology. The latest 2025 solar inverter prices by top brands like Huawei, Growatt, SMA, RENYUAN, and DEYE. Compare models, features, and global trends to make the best choice for your solar project.

What is a small power inverter?

Small Inverters. Our Small Inverter category includes inverters generally ranging from 125 watts to 2000 watts in 12 and 24-volt capacities. These small power inverters are great for smaller applications like boats, RVs, or other relatively smaller systems. In addition to the size, choosing an inverter with the right wave form is also important.

How much does a microinverter cost?

While they cost more than string inverters, averaging \$1.15 per watt, they offer the benefit of independent panel optimization. For a 5 kW system, the cost is approximately \$5,750. Microinverters generally come with warranties of around 25 years, which aligns with the expected lifespan of the solar panels themselves.
