
Small solar powered water pump

How do solar powered water pumps work?

Solar powered water pumps are efficient water pump systems that are powered by the energy collected by solar panels. As the solar panels come in contact with the sun's rays, the solar system will collect that energy and convert it into a form that the water pump can use to operate. Want more information on how solar panels work?

Are solar powered water pumps effective?

We discovered that solar powered water pumps can be a powerful and effective way to move water by only using the power of the sun. We're committed to developing new solar products which create elegant and innovative solutions for all your water pumping needs including hydroponic systems and aquaponics/aquaculture.
