
Sodium ion energy storage all-vanadium liquid flow battery

Are all-solid-state sodium batteries the future of energy storage?

Moreover, all-solid-state sodium batteries (ASSBs), which have higher energy density, simpler structure, and higher stability and safety, are also under rapid development. Thus, SIBs and ASSBs are both expected to play important roles in green and renewable energy storage applications.

What is a vanadium ion battery?

With the aim to address these challenges, we herein present the vanadium ion battery (VIB), an advanced energy storage technology tailored to meet the stringent demands of large-scale ESS applications. The VIB is based on an advanced electrochemical framework integrating all-vanadium chemistry with a streamlined cell architecture.

What is a aqueous vanadium ion battery (VIB)?

First real-world demonstration of aqueous vanadium ion battery (VIB). Maintains over 99 % of initial capacity over 12,000 cycles at 20 C-rate. Achieved 98.1 % round-trip energy efficiency at 1 C-rate. Enables safe and reversible full discharge to 0 V without degradation.

What are vanadium redox flow batteries (VRFBs)?

Vanadium redox flow batteries (VRFBs), widely researched as an alternative for large-scale applications, provide a number of benefits including safety and long cycle life.
