What is PV cell and module technology research?

PV cell and module technology research aims to improve efficiency and reliability, lower manufacturing costs, and lower the cost of solar electricity.

Can SDM and DDM be used to model solar PV cells/modules?

In the present research, reconfigured SDM (Reconfig-SDM) and reconfigured DDM (Reconfig-DDM) for improved modeling of solar PV cells/modules have been proposed. In these models, a resistance is added in series with the diodes in SDM and DDM.

Why is research in cell and module design important?

Research into cell and module design allows PV technologies to become more sophisticated, reliable, and efficient. Research in this topic area covers more traditional technologies like crystalline silicon, cadmium telluride (CdTe), and III-V PV.
