# Solar panel installation across the house

How to install solar panels?

The first step in solar panel installation is fixing the mounting structure to support the panels. The whole mounting structure must be tilted and have an angle between 15 to 20 degrees to have maximum sunlight exposure. For countries in the Northern Hemisphere, the best direction to face solar panels is south because it gets maximum sunlight.

Can you install solar panels above a roof?

If you move ahead, make sure you stay within planning permission guidelines. Your panels must not stick out more than 60cm from the roof's surface, and no part of the installation can be more than four metres above the roof. Can you install solar panels on the ground?

Should I install a solar power system?

Your solar power system can be: For urban homeowners, an on-grid solar panel for home system is often the most cost-effective. Professional installation ensures long-term safety and performance. A certified installer will: Always request an AMC (Annual Maintenance Contract) and ensure post-installation support.

How long does it take to install solar panels?

Solar installations involve multiple steps--from initial consultations and system design to generating electricity. Each step takes time, with typical installations taking two to three months from start to finish. A good solar company makes the installation process easy. Still, a lot goes into getting panels up and running on your roof.
