What are emergency and standby power systems?

Emergency and standby power systems are designed to provide an alternate source of power if the normal source of power, typically the electric utility service, should fail. Reliability of these types of systems is critical and good design practices are essential. Classification of Emergency and Standby Power Systems

What is an emergency power supply system (EPSS)?

The emergency power supply system (EPSS) is an independent power system, consisting of its own on-site power generation and distribution systems (whose normal power supply comes from Class III). This system belongs to Group II.

What is the basic configuration of an emergency/standby power system?

Basic Single Engine Configuration The most basic configuration of an emergency or standby power system is a single engine with single or multiple transfer switches shown in Simple Emergency/Standby System Arrangement. The transfer switch(es) transfer the emergency/standby loads to the alternate source upon loss of the normal source.
