
Tunisia Communications Wireless Base Station Work

Is Tunisia using WiFi 6e?

On December 10, 2024, The Tunisian Ministry of Communication Technologies officially authorized the use of WiFi 6E frequency bands (5925-6425 MHz) for RLAN (WiFi) services, allowing for faster and more efficient wireless communication.

Why are base stations important?

Base stations are the backbone of wireless communication networks, playing a pivotal role in signal transmission, network reliability, and high-speed data connectivity. As technology evolves, the importance of base stations will continue to grow, addressing new challenges and supporting the ever-expanding demand for wireless communication services.

What is the role of base stations in IoT?

Facilitating Internet of Things (IoT) Connectivity: Base stations play a significant role in IoT applications. They provide the necessary infrastructure for connecting numerous devices, ensuring seamless communication and data exchange. 1.

Do base stations support roaming?

Handoff and Roaming: As users move, their connection may need to switch from one base station to another. Base stations manage handoffs, allowing uninterrupted service during transitions. They also support roaming by maintaining connectivity when users travel beyond their home network's range. 1.
