# Victoria Base Station Communications Maintenance

What is a base station in a wireless network?

An integral part of a wireless communication network, a base station (often known as a repeater) enhances the radio coverage and reliability of a system. It is a fixed transceiver that connects one or more wireless networks for communication purposes, capable of sending and receiving wireless signals.

What is a mobile base station?

Most mobile base stations can be broken into four key features -- the antennas, the supporting structure (the tower itself), the hardware (the technology that supports wireless communication between user equipment--UE, or a mobile phone, for example--and a network) and a link to the exchange.

How many mobile phone base stations are there in Australia?

From a report in 2017, there were 21472 mobile phone base stations in Australia, most of which (7772) were owned by Telstra. These towers serve to cover most of the country for wireless (data) internet and mobile phone calling. And this network is rapidly expanding.

In a wireless base station, the data communication system ensures the transmission of data that is at the core of the wireless network. The data communication system of a wireless base ...
