
Where can I buy solar power tiles

What are solar tiles?

Solar tiles are roofing materials that can produce energy directly from sunlight. Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof.

Should you buy solar tiles?

If you want to benefit from solar power for your home while preserving the aesthetics of a tiled roof, then yes, you should definitely consider buying solar tiles. Sometimes called 'invisible solar', solar tiles are also an excellent option for solar power upgrades to listed buildings or buildings in conservation areas.

Is the investment in solar roof tiles worth it?

Solar roof tiles are worth it for new constructions where the homeowner is keen on a solar installation. However, they are significantly more pricey and precious than a traditional roof. Solar roof tiles are also advisable for properties in conservation areas, where building restrictions apply.

Can solar tiles be used on a roof?

They are also fantastic for complex roofs with cross-gables, dormer windows, sloped gables, and other non-standard pitched roofs. In most cases, using solar tiles enables significantly larger solar installations (in terms of area) compared to traditional solar panels.
